Art Unit: 3772

DETAILED ACTION

This Office action is based on the amendments filed October 19, 2011 for application 10/593,367. The information disclosure statements filed June 27, 2011; July 20, 2011; July 27, 2011; August 2, 2011; August 10, 2011; August 17, 2011; August 30, 2011; September 19, 2011; and October 19, 2011 have been considered by the examiner on October 25, 2011 and the information disclosure statement filed October 31, 2011 has been considered by the examiner on November 4, 2011. Claims 1, 12, 29, and 33 have been amended and claims 20-22, and 38 have been cancelled; claims 1-19, 23-29, 33, 34, 36, 37, and 39-42 are currently pending.

Allowable Subject Matter

Claims 1-19, 23-29, 33, 34, 36, 37, and 39-42 as amended in the reply filed October 19, 2011 are allowed over the prior art of record. The following is an examiner's statement of reasons for allowance:

The claims in this application have been allowed because the prior art of record fails to disclose, either singly or in combination, the claimed apparatus and method for treating pelvic organ prolapse comprising a main body and an anchoring body that selectively rests within a receiving site on the main body, wherein the ring body is ring shaped, ovoid, or multi-sided and is foldable at least three different points or along at least two axes, and wherein the apparatus does not directly compress a urethra upon insertion in combination with the other claim limitations.

The closest prior art of record is Zunker et al. (US Patent 6,676,594), previously cited in the Office action mailed June 21, 2011, which discloses an apparatus (100) for treating pelvic organ prolapse comprising a disposable thin main body (102+110+120) adapted to provide

Art Unit: 3772

pelvic organ support when inserted into a vagina; an anchoring body (144) that selectively rests within at least one deformable receiving site (146), which is a hole or indentation located on an inner circumference of the main body allowing the anchoring body to be attached to the main body when resting within the at least one receiving site and removed from the main body when detached from the at least one receiving site; a device displacer (140, 142) adapted to impart movement to the apparatus; and an applicator (insertion tool) adapted for insertion of the apparatus; wherein the main body is three-dimensional and therefore extends along three axes (x, y, and z) such that it is non-planar; and wherein the apparatus is adapted to be flexible in response to a force applied on the apparatus while in the vagina and during removal from the vagina such that the main body is deformable at least three points thereon (Fig. 8; column 5, lines 32-54; column 6, lines 20-50; column 7, lines 23-26). However, Zunker fails to teach that the main body is ring shaped, ovoid, or multisided and that the apparatus does not directly compress the urethra.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
